

Leak Detection Checklist

Here are some of the places leaks may be hiding in your home.

Use this checklist to identify leaks and determine if you can fix them or if you need to call a plumber. Additional leak detection tips can be found at www.libertyenergyandwater.com.

In the Bathroom

- Toilets: Listen for running water and contact Liberty to obtain a leak detection tablet.
- Faucets: Listen for drips and tighten aerators or replace fixtures if necessary.
- Showerheads: Turn on and look for drips or stray sprays that can be stopped with tape.
- In the tub: Turn on the tub, then divert the water to the shower and see if there's still a lot of water coming from the tub spout; that could mean the tub spout diverter needs replacing.
- Under the sink: Check for pooling water under pipes and rust around joints and edges.

In the Kitchen

- Faucet: Listen for drips and tighten aerators or replace fixtures if necessary.
- Sprayer: Check that water is spraying smoothly and clean openings as needed.
- Under the sink: Check for pooling water under pipes and rust around joints and edges.
- Appliances: Check for pooling water underneath dishwashers and refrigerators with ice makers, which could indicate a supply line leak.

In the Laundry or Utility Room

- Under the sink: Check for pooling water under pipe connections.
- Clothes washer: Check for pooling water, which could indicate a supply line leak.

In the Basement or Utility Room

- Check under your water heater for signs of pooling water or rust.

Don't Forget to Go Outside

- At the spigot: Check that the connection between the hose and spigot is tight and see if the hose washer needs replacing.
- In-ground irrigation system: Check for broken sprinklers or nozzles spraying in the wrong direction. Confirm that your sprinklers are watering your lawn and not your pavement.
- Use a smart irrigation controller that takes the guesswork out of scheduling your watering.

Mark any Leaks with an X

Throughout the House

- Check for signs of moisture or mold on your walls, ceilings, or floors. This could indicate that a pipe is wreaking havoc behind the scenes and requires the attention of a professional.
- If any of your fixtures needs replacing, remember to look for the WaterSense label when purchasing plumbing products. WaterSense labeled products are independently certified to use at least 20 percent less water and perform as well or better than standard models.
